

CLAIMS

What is claimed is:

- 1 1. A method for conducting a search for stored information, comprising the
2 steps of:
3 presenting a user interface to a user;
4 receiving an identification of a particular search language in which to search;
5 receiving a search query; and
6 conducting a search of a database that contains information written in the
7 identified language.
- 1 2. The method of claim 1, wherein the user interface comprises a search site
2 accessible via a network.
- 1 3. The method of claim 2, wherein the search site comprises a web site
2 accessible via the Internet.
- 1 4. The method of claim 1, wherein the search language is selected from a
2 group of several different available languages which each pertain to a different language
3 database.

1 5. The method of claim 1, further comprising the step of receiving selection
2 of a different search language in which to search.

1 6. The method of claim 5, further comprising the step of reconfiguring the
2 user interface so it is presented in the different search language.

1 7. The method of claim 5, further comprising the step of translating the
2 search query into the different language.

1 8. The method of claim 7, further comprising the step of conducting a search
2 for the translated search query in a database containing information written in the
3 different language.

1 9. The method of claim 1, further comprising translating results located
2 during the search into a language selected by the user.

1 10. A universal search engine, comprising:
2 means for interfacing with a user; and
3 means for searching one of several different available language databases in one
4 of several different available search languages.

1 11. The search engine of claim 10, wherein the means for interfacing with a
2 user comprises a web site accessible via the Internet.

1 12. The search engine of claim 10, further comprising means for receiving
2 selection of a different search language.

1 13. The search engine of claim 10, further comprising means for reconfiguring
2 the means for interfacing with a user when a different search language is selected.

1 14. The search engine of claim 10, further comprising means for translating a
2 search query into a different language.

1 15. The search engine of claim 14, further comprising means for searching for
2 the translated search query in a database containing information in the different language.

1 16. Search engine software stored on a computer readable medium,
2 comprising:

3 logic configured to present a user interface to a user;

4 logic configured to receive an identification of a particular search language;

5 logic configured to receive a search query with the user interface; and

6 logic configured to search a database that contains information in the identified
7 language.

1 17. The software of claim 16, further comprising logic configured to receive
2 selection of a different search language.

1 18. The software of claim 17, further comprising logic configured to
2 reconfigure the user interface so as to be written in the different search language.

1 19. The software of claim 17, further comprising logic configured to translate
2 the search query into the different language.

1 20. The software of claim 19, further comprising logic configured to search
2 for the translated search query in a database containing information in the different
3 language.
